Moblize launches web portal to monitor, track and control virtually any fixed and mobile asset in real time for any industry like mining, oil and gas, commercial fleet, construction, power generation.

HoustonTX, September 25th 2007- Moblize, an innovator in providing real time surveillance technologies solutions to enable Smart Services for industries like oil and gas, commercial fleet, construction, power generation and mining, today announced the official release of the Megs1.5 web portal to monitor any remote fixed and mobile asset from a single platform. .

MEGS1.5 is the only solution which helps ***solve 3 business problems simultaneously***; it effectively manages mobile workers, their work and your mobile and fixed assets often known as MRM in the telematics industry. It's the total solution allowing you to track, view, troubleshoot, diagnose, and resolve problems with any remote assets through one single platform. All your data becomes actionable; and with rules and filters in MEGS significant events are transmitted the moment they happen to the key stakeholders in your enterprise.

"MEGS gives you all the control you need to seamlessly monitor, control, track and manage your asset and location data," says Amit Mehta, Principal Moblize. "Every business has multiple asset type like humans, trucks, other machinery etc. which must be in operational condition all the time, that's what MEGS ensures, it helps you keep them running all the time," he further added.

About Moblize

Moblize is a leading provider of Advisory Services and remote sensor to web surveillance solutions that help clients connect people, systems with any remote assets type fixed or mobile. The company operates two service lines, Moblize Advisory Services which specializes in helping clients select/build/deploy/evolve "Best of Breed" end-end solutions to effectively manage their mobile workers, their work and fixed/mobile remote assets, Moblize Product Group supplies a range of real time technologies from sensor to web based managed services to enable variance reporting, exception reporting, proactive work identification and work efficiency improvement. We are currently working with companies in mining, power generation, commercial fleet and oil and gas industry.
